

TAKE & MAKE SCIENCE

# Sensory Sensations

@ Lansing Library

## Materials Included:

- Sand paper

# Sand Paper Rankings

This activity demonstrates the exquisite sensitivity of our sense of touch.

1. Become familiar with the different pieces of sandpaper by playing with them in your hands. Each should be a different degree of rough, the higher the number on the back of the piece, the finer the grit or more smooth the sandpaper.
2. Mix up the pieces of sandpaper and place them with the rough side up. Using your finger, line up the pieces of sandpaper in order...from the smoothest to the roughest. To check your guesses, turn over each piece—the numbers should go in order from highest to lowest.
